

The diagram illustrates a hydronic heating system. On the left, a 'POMPA DI CALORE' (Heat Pump) is shown with two fans. It is connected to a network of pipes. A red dashed line indicates the flow of hot water from the heat pump to a 'BATTERIA' (Radiator) and a 'RISCALDAMENTO A PAVIMENTO' (Underfloor Heating) system. A blue dashed line indicates the flow of cold water from these components back to the heat pump. A central 'ACCUMULO BPU' (Storage Tank) is connected to the system. It has a red coil inside, which is connected to the red line. The tank also has a 'T' symbol on its side. The system includes various valves, pumps, and a control panel with multiple buttons and switches. The entire system is connected to a power supply and a ground connection.
